## Configuration files & help

See `~/.config/foot/foot.ini` which is a symlink to either `foot_dark.ini` or `foot_light.ini`. These configs should be mirrored whenever you make changes to anything but the color scheme. See `man 1 foot` for overview of all keybindings, `man 5 foot.ini` for config options, `man 7 foot-ctlseqs` for discovering available **control sequences**. Don't manually change opacity of the terminal. Instead use **termopacity** script as those values are defined in more than one place.

## Keybindings

<i>Key combo</i>	<i>functionality</i>
MOD + Space	Spawn another terminal window in the same directory.
Shift + PgUp/PgDn	scroll up or down in the terminal history.
Ctrl + -	Decrease terminal font size.
Ctrl + +	Increase terminal font size.
Ctrl + Shift + R	enter search mode.
Ctrl + k	(in search mode) go to next result.
Ctrl + j	(in search mode) go to previous result.
Ctrl + w	(in search mode) extend selection by a word.
Enter	(in search mode) copy selected text to foot clipboard.
Ctrl + Shift + I	paste text from foot clipboard.
Ctrl + Shift + U	detect URL and OSC 8 links in the terminal (handled by bemenuhandler)
Ctrl + Shift + C	transfer foot clipboard text to system clipboard.
Ctrl + Shift + V	paste from system clipboard.
